

AI Tools Drive Many New Products at the CES 2025 Electronics Show

At this year's CES show in Las Vegas, Nevada, crowds from around the world came to see the latest products built with artificial intelligence (AI).

CES is produced by the Virginia-based Consumer Technology Association. It presents the latest electronic product offerings or features, targeting consumers. More than 138,000 people attended the event which ended last weekend.

More than 4,000 companies presented products at CES 2025. Here is a look at some of the top products shown at this year's 2025 show:

Smarter TVs?

CES is historically an event at which large electronics manufacturers introduce their latest and greatest televisions. This year was no different.

South Korean TV makers LG and Samsung both announced new smart models with built-in AI tools. Others – including Japan's Panasonic and China's Hisense and TCL – also released TV models with new AI tools.

Korean manufacturer LG said its latest models are equipped with AI technologies designed to autonomously improve picture brightness, sharpness and sound quality. The AI improvements are powered by the company's own a11 processor technology.

LG also announced new updates for its Magic Remote device controller, saying new AI tools were added to provide more detailed search and interactive possibilities with users.

Samsung introduced a system called Samsung Vision AI for its line of OLED and QLED TV models. The company said the AI tools are meant to turn the TVs into more "intelligent" assistive devices and to help "simplify and enrich everyday living" for its users.

One example is a feature that permits users to click on different screen elements to receive immediate information about what they see. The company said another tool makes it possible to activate live language translations on-screen.

Transport and personal robots

Several companies at CES introduced robotic transport vehicles designed to travel over many kinds of surfaces or terrain.

One model was built by Kubota, a Japanese maker of farm and building equipment. The company demonstrated how the KATR four-wheeled robot uses hydraulics to control the vehicle's four legs independently. This design seeks to keep the robot secure and level even when working on hills or in rocky areas.

Kubota says the vehicle – which is able to carry loads up to 240 kilograms – is small enough to be transported in most pickup trucks.

Chinese developer Unitree Robotics showed off a dog-like robot model called Go2. The robot was designed with a series of cameras, sensors and AI tools. The company says this permits Go2 to make smooth movements and automatically follow its owner. It is able to carry small loads on its back and can also be used in security operations involving businesses or individuals.

Demonstrations at CES showed Go2 doing tricks, like standing on two legs, dancing and giving high fives to visitors. The company produces several other dog-like models, as well as humanoid robots.

Aircraft carrier vehicle

The latest flying car designs are also a yearly favorite at CES. But this year, Chinese automaker XPENG took its presentation a step further by introducing a combination truck and flying vehicle.

The company calls the system a Land Aircraft Carrier. It includes a large transport van with enough space to transport a vertical landing flying vehicle inside. The idea is for users to be able launch the flying vehicle from anywhere the van can go. The flying car is fully autonomous and can carry two people at a time.

Chinese media reported the company – which also offers several traditional vehicles on its website – plans to sell the combination for about \$300,000. XPENG said it will aim to increase

production for all its vehicles in the coming year.

Self-charging vehicle

California-based Aptera Motors demonstrated a new electronic vehicle model with a built-in charging system. The company explains on its website that the vehicle has solar panels on its surface to capture energy from the sun. When charged this way, Aptera claims the car can travel up to 64 kilometers in a single day without being plugged in to a power source. On a full charge, the company says the vehicle can travel up to 640 kilometers.

Salt enhancing spoon

Japanese drink producer Kirin Holdings introduced a new product that aims to strengthen, or enhance, the taste of salt in food products without increasing the amount of salt. The spoon-shaped device uses electricity to increase saltiness. The company says the tool – which can be taken anywhere – sends a weak electric current through the top of the device to food.

Power-assisted skis

French electric sports equipment maker SQ-Motors presented an all-terrain electric board that can move on roads and snow. The company calls its invention the Sternboard. It is a three-wheeled board with an electric motor in the back.

First designed to be an electric skateboard, a version was developed to move on snow. The powered boards have reached speeds of more than 60 kilometers per hour in tests.

This prototype all-terrain electric skateboard has been modified to permit power-assisted skiing. The ski version was recently demonstrated at the CES show in Las Vegas, Nevada. (Image Credit: SQ-Motors)

But the snow versions are not designed for speed. They seek to provide users with the ability to go up hills or move long distances over level land.

Vocabulary

consumer - n. ผู้บริโภค. บุคคลหรือกลุ่มคนที่ซื้อสินค้าเพื่อการใช้งานส่วนตัว ไม่ใช่เพื่อธุรกิจ

feature - n. คุณสมบัติ. คุณลักษณะของผลิตภัณฑ์ที่ผู้ผลิตต้องการให้ผู้ซื้อที่เป็นไปได้ทราบ

autonomous - adj. อัตโนมัติ. สามารถทำงานหรือภารกิจได้โดยไม่ต้องได้รับความช่วยเหลือ

enrich - v. เพิ่มพูน. ทำให้คุณภาพของบางสิ่งบางอย่างดีขึ้น

screen - n. จอภาพ. อุปกรณ์แบนราบที่แสดงภาพอิเล็กทรอนิกส์หรือวิดีโอ

translate - v. แปล. เปลี่ยนคำจากภาษาหนึ่งไปเป็นอีกภาษาหนึ่ง

terrain - n. ภูมิประเทศ. พื้นดินชนิดใดชนิดหนึ่งโดยเฉพาะ

hydraulics - n. ระบบไฮดรอลิก. ระบบที่ใช้ของเหลวในการเคลื่อนย้ายหรือยกอุปกรณ์หรือชิ้นส่วนด้วยกลไก

vertical - adj. แนวตั้ง. ไม่ราบเรียบ แต่ตั้งตรงขึ้นและลง

charge - v. ชาร์จ. ป้อนพลังงานไฟฟ้าเข้าสู่แหล่งพลังงาน เช่น แบตเตอรี่ เพื่อให้ทำงานเชิงกลหรืออิเล็กทรอนิกส์

Reading Comprehension Quiz

1. What was the primary focus of the products showcased at this year's CES show in Las Vegas?

- A. Sustainable energy solutions
- B. Artificial intelligence (AI) integration
- C. Advanced gaming consoles
- D. Retro electronics revival

2. Which organization is responsible for producing the CES event?

- A. The Las Vegas Convention Center
- B. The Consumer Technology Association
- C. The Nevada Electronics Board
- D. The Global Innovation Alliance

3. Approximately how many companies participated in presenting products at CES 2025?

- A. Around 1,380 companies
- B. More than 4,000 companies
- C. Exactly 2,025 companies

D. Fewer than 1,000 companies

4. Who from Samsung was specifically mentioned as debuting Samsung Vision AI for TVs during CES?

- A. Eric Jamison
- B. SW Yong
- C. Abbie Parr
- D. John Locher

5. What is a consistent historical characteristic of the CES event regarding large electronics manufacturers?

- A. Introducing new types of kitchen appliances
- B. Focusing on personal computing advancements
- C. Introducing their latest and greatest televisions
- D. Showcasing wearable technology innovations

6. Which of the following groups of countries had TV manufacturers that announced new smart models with built-in AI tools at CES?

- A. Japan, Germany, and the United States
- B. South Korea, Japan, and China
- C. China, Germany, and South Korea
- D. United States, Japan, and China

7. According to LG, what aspects of TV quality does its latest AI technology aim to autonomously enhance?

- A. Frame rate and internet connectivity
- B. Picture brightness, sharpness, and sound quality
- C. Screen size and energy efficiency
- D. Remote control functionality and app compatibility

8. Beyond picture and sound enhancements, what new functionality did LG add to its Magic Remote device controller using AI tools?

- A. Voice-activated channel changing
- B. Automatic device pairing
- C. More detailed search and interactive possibilities
- D. Enhanced battery life indicators

9. What is the primary objective of Samsung Vision AI for its TV models, as stated by the company?

- A. To reduce energy consumption
- B. To turn TVs into more 'intelligent' assistive devices and simplify daily living
- C. To improve gaming performance and graphics
- D. To provide access to exclusive streaming content

10. Which of these is a specific AI-powered feature of Samsung TVs mentioned in the article?

- A. Automated self-cleaning screen
- B. The ability to activate live language translations on-screen
- C. Wireless charging for external devices
- D. Integrated holographic projections

11. How does Kubota's KATR four-wheeled robot maintain stability when operating on challenging terrain like hills or rocky areas?

- A. It uses a gyroscopic balancing system.
- B. It has an advanced suspension system.
- C. It utilizes hydraulics to control its four legs independently.
- D. It adjusts its center of gravity automatically.

12. What is the maximum weight load that Kubota's KATR robot is capable of carrying?

- A. Up to 120 kilograms
- B. Up to 240 kilograms
- C. Up to 360 kilograms
- D. Up to 480 kilograms

13. Which statement best describes the primary capabilities of Unitree Robotics' Go2 dog-like robot?

- A. It specializes in high-speed racing and obstacle courses.
- B. It is designed for underwater exploration and rescue missions.
- C. It can perform smooth movements, automatically follow its owner, and carry small loads for security operations.
- D. It acts as a personal assistant, managing schedules and making calls.

14. What is the distinguishing characteristic of XPENG's 'Land Aircraft Carrier' system?

- A. It is a traditional electric truck with advanced navigation.

- B. It is a drone capable of carrying heavy cargo.
- C. It combines a large transport van with an internal vertical landing flying vehicle.
- D. It is an autonomous bus designed for public transport.

15. What is the reported approximate cost of XPENG's combination truck and flying vehicle system, according to Chinese media?

- A. About \$100,000
- B. About \$200,000
- C. About \$300,000
- D. About \$400,000
